## GREEN CHEMICALS SRL

---

### **Caffaro Green Chemicals Srl becomes operational on November 1st**

The new society keeps its productive activities (research and operational assistance) in Torviscosa's company complex. **Caffaro Green Chemicals Srl will produce and sell plasticizers and compounds** that will be **less and less related to the oil's production chain**.

**A deep environmental sensibility** has brought the Group to establish this innovative productive process whose aim is to promote **a new and eco-friendly chlorine-paraffin range** (therefore the company name of "*Green Chemicals*"). The market entry of this new product is expected **within the first semester of 2016**.

The strong industrial integration that countersigns Caffaro Group makes possible the introduction of state-of-the-art products and allows our R&D Department to **develop and experiment green raw material in I.C.P.'s factory**. Specialized in the production of PVC "plastic-coated" compounds, I.C.P. has its operative complex in Cotignola (Ravenna), where the new green product has been developed.
